This \$45 million two-story acute care hospital was designed to expand to 4-stories in the future, providing the community with 200 beds. The 134,000 sf facility was designed with steel frames that would be constructed in phases, a 45,000 sf medical office building, an emergency department and a diagnostic and treatment center complete with outpatient capabilities.

BNI was brought in to the 653,000 sf, \$57 million expansion at Florida's eighth largest hospital. Phase I includes a parking garage and the Bixler Emergency Center. Phase II consists of a Family Care unit, Women's and Children's Center and a professional office building, as well as the remainder of the 800-car parking garage. There will also be a helicopter landing pad for emergency patients.

This project offers several structural complexities, including difficult subsoil conditions, a site that slopes 22 feet, and tie-ins to the existing hospital. A portion of the project is six stories tall while the remainder is three stories but designed for future expansion to seven stories.

This 80-bed acute care hospital for Baptist Health South Florida includes surgical, obstetrics, and intensive care beds. The facility consists of a 4-story, 318,000 sf hospital with a medical office building. The structure consists of reinforced concrete with exterior precast walls, which reflects the Mediterranean style similar to the other facilities at Baptist Health campuses. The hospital is to be designed to withstand Category 5 hurricanes.
